## SUMMARY

A self-taught frontend developer passionate about web development and modern technologies. Especially skilled in React, JavaScript, Typescript and SCSS. Seeking an entry-level role to further develop self programming skills and support the team with solving problems.

## PROJECTS

### WorkTracker

This is a full-stack task management application that allows users to organize daily tasks, track progress, and receive notifications. Key features include task creation, editing, and removal, progress monitoring, user authentication, and profile management. It also features responsive design and secure authentication with token-based authorization. Built with **React, Node.js, MySQL, NodeJS, SASS, Bootstrap, JWT and MUI.**

### RunBoost

A simple page showcasing running equipment like shoes, watches, and other running essentials. Users can explore and find the best items to improve their running experience. Developed with **React and SASS.**

### JourneyTracker

A planning application where users can define travel destinations, manage budgets and costs, pack lists, save notes, and upload photos. Built with **React, TypeScript, and Redux.**
